What is Stakeholder Mapping?

Stakeholder Mapping is a Design Thinking tool used to identify, analyse, and prioritise all individuals or groups who are affected by or have influence over a project. The most common technique is the **Power-Interest Grid**, a 2x2 matrix that classifies stakeholders based on their level of **power** (ability to influence the project) and **interest** (how much they care about the outcome). This helps teams design appropriate communication and engagement strategies for each group.

Project Context

360-Degree Digitalization of Bank Service refers to a comprehensive transformation of all banking operations — from customer onboarding, account management, loans, and payments, to internal processes — into fully digital, paperless, and AI-assisted systems. Such a large-scale transformation involves numerous stakeholders across regulatory, technical, financial, and customer dimensions, making stakeholder mapping essential for successful implementation.

Stakeholder Map — Power-Interest Grid

Detailed Stakeholder Analysis

Quadrant	Stakeholder	Strategy	Engagement Approach
Manage Closely	Bank CEO & Board of Directors	Direct involvement	Weekly steering committee meetings, final approval authority
Manage Closely	RBI & Government Regulators	Compliance first	Formal submissions, regulatory sandbox testing, audits
Manage Closely	Core Banking IT Team	Active collaboration	Daily standups, sprint reviews, technical documentation
Manage Closely	Cybersecurity Department	Embedded from Day 1	Security audits at every phase, penetration testing

Keep Satisfied	Shareholders & Investors	Periodic updates	Quarterly reports, ROI projections, board presentations
Keep Satisfied	NPCI	Technical alignment	API integration meetings, compliance verification
Keep Satisfied	Banking Ombudsman	Transparency	Grievance redressal process documentation
Keep Informed	Bank Customers & Account Holders	Regular communication	Email/SMS updates, in-app notifications, FAQs
Keep Informed	Small Business Owners	Targeted outreach	Dedicated webinars on new digital features
Keep Informed	Senior Citizens	Extra support	In-branch digital literacy training sessions
Monitor	General Public	Passive monitoring	Public press releases, social media updates
Monitor	Media & Press	Reactive response	Press kits, spokesperson statements when needed
Monitor	Third-party Vendors	Contract management	SLA reviews, periodic vendor performance checks

Key Design Thinking Insights

Critical Stakeholder

RBI and Government Regulators must approve all major digital banking changes before implementation. Their buy-in is non-negotiable — any digitalization initiative without early regulatory alignment risks complete project failure or costly redesigns.

Pain Point Identified

Senior Citizens face significant digital literacy barriers and may resist or struggle with new digital-only services. Special onboarding support, in-branch training sessions, and simplified UI designs are essential to avoid excluding this demographic.

Key Opportunity

Small Business Owners stand to benefit the most from 24/7 digital banking access — instant loans, real-time transaction tracking, and digital invoicing. They can become the strongest advocates and word-of-mouth promoters of the digitalization initiative.

Risk Mitigation

The Cybersecurity Department must be embedded into the project from Day 1, not added as an afterthought. Digital banking transformations significantly increase attack surface area, and early security-by-design prevents costly breaches post-launch.

Power-Interest Grid Summary

Quadrant	Strategy	Stakeholders
High Power, High Interest	Manage Closely	CEO, RBI, IT Team, Cybersecurity
High Power, Low Interest	Keep Satisfied	Shareholders, NPCI, Ombudsman
Low Power, High Interest	Keep Informed	Customers, Small Business, Seniors
Low Power, Low Interest	Monitor	Public, Media, Vendors
